Final Exam

A. Fill in the gaps using the words below. There are <u>two extra words</u>. (10x1.5=15 points)

previous contraction slip theoretical pitch cold sufficient crack seizing angle feed cooling

Propeller is	the difference between actual and	travel
resulting from a necessary propel	ler blade of attack.	
The engineer must inspect the	engine for a supply of f	fuel oil, lube oil and
water.		
Large amounts of	water should not be added to the en	gine if the engine is
still hot from	operation.	
Sudden cooling can	the cylinders or cylinder heads an	d may cause unequal
of the structura	l and working parts and lead to	of the
pistons.		

B. Fill in the gaps using the words below. There are <u>two extra</u> words. (10x1.5=15 points)

total-loss boss external pressure internal cylinder hull blade helicoidal temperature cavitation thrust

-- Diesel engines rely on some ______ source of power for starting. -- ______ can occur as a result of ______ variations on the back of a

-- ______ can occur as a result of ______ variations on the back of a propeller ______.
-- The ______ block transfers the thrust from the propeller to the ______ of

-- The ______ block transfers the thrust from the propeller to the ______ of the ship.

-- The propeller consists of a(n) ______ with several blades of ______ form attached to it.

-- _____ lubrication of crosshead engines is a(n) ______ system.

C. Fill in the gaps with a word of your own choice. (10x2=20 points)

-- The cylinder oil burns and is partly scraped down to the ______ air space where it is drained.

--The lube oil is stored in the _____ or drain tank.

--The use of inappropriate lube oil may cause carbon _____

-- Explosion ______ valves or doors are fitted in the ______ as a practical protection against explosions.

-- In mechanical governors a ______ assembly is used to detect engine ____

--The lubrication system provides a supply of oil to the _____ parts of the engine. It enables the formation of a _____ of oil between them to minimize _____ and wear.

D. Fill in the gaps with a word that begins with the letter given. (10x1.5=15 points)

Example: The l______ system provides oil to the engine. Correct answer: lubrication

--Accessories should be inspected for l_____ connections.

--Inspect the fire **e**_____ for full charge, security and cleanliness of valves and

n_____.

--Pistons **r**_____ and compress the air drawn into the cylinder.

--A propeller which turns **c**_____ when viewed from aft is considered right-handed.

--C______ is the forming and bursting of vapour-filled bubbles on the back of a

propeller **b**_____

--More serious damage should be repaired by w_____

--S______ is the most misunderstood of all propeller terms.

--The tailshaft has a flanged face where it joins the **i**_______ shafting.

E. Fill in the gaps with a suitable form of the words in parentheses (20x0.75=15 points)

--A speed sensing ______ (arrange) and a hydraulic unit are the ______ (base) systems of a governor. --The beach became smaller because of the _____. (erode) --His mistake is a result of his _____ not his bad intentions. (ignore) --If you want to get a job in this company you have to fill in an ______ first. (apply) --This spare is not _____, we need an original one. (suit) --A _____ (reduce) in speed lowers the spindle. --The thrust block is a part of the main ______ engine. (propel) --The hotel was in a very bad _____. (locate) --A speed selector changes the ______ of the spring. (compress) -- The lube oil ______ (consume) is a ______ (signify) economical factor for the ship. -- If the _____ (press) in the lube oil system is _____ (adequate), an alarm will sound. --There are ______ designs of valves. (vary) --The lube oil can also be used as a _____. (cool) --The _____ of the ship was very slow. (move) --I didn't know the way so I asked for _____. (direct) --When _____ (exceed) oil mist is _____ (presence) in the crankcase, there is great danger of explosion.

F. Match the words in column A to their synonyms in column B. (10x0.5=5 points)

А	В	Correct Pairs
forged	resist, tolerate	
skilled	force directed forward	
thread	shaped by heating and hammering	
withstand	conduct, perform	
erosion	trained and experienced	
polish	take no notice of	
transfer	make smooth and shiny	
corrosion	spiral ridge round a screw or bolt	
thrust	change position, move	
ignore	chemical reaction of a metal with its environment	
carry out		

G. Write a paragraph on <u>either</u> a) <u>or</u> b) (15 points)

a)The importance of lubrication for diesel engines.

b) Safety devices that prevent fires, explosions, etc. in the engine room.

GOOD LUCK!!!
